

Connected+Protected Air

A Smart Home, Made Simple

The Connected+Protected Air kit is an advanced smart home solution that makes life easier while improving your comfort, reducing your energy costs and protecting your heating and cooling system.

Comfort and Convenience

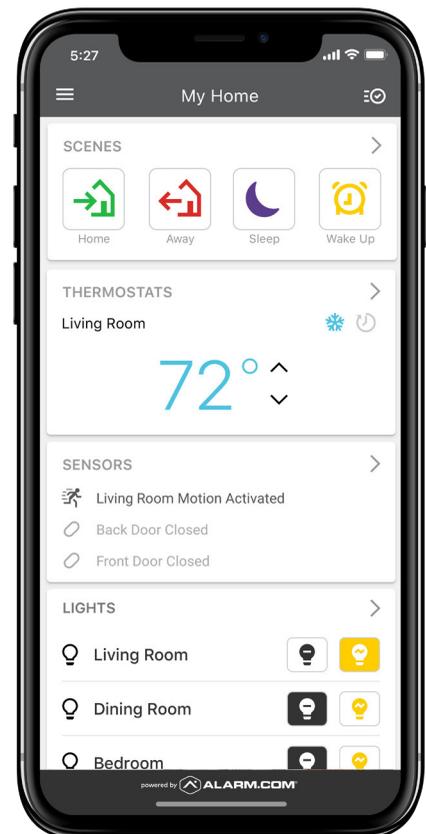

Control your home's heating and cooling system from anywhere with the user-friendly Mobile App. Schedules and location-based automation enable you to come home to the perfect temperature and save money on your energy bill.

Enhanced Safety

The smart Carbon Monoxide Alarm protects you from unsafe CO levels with an onsite alarm, push notifications and automatic shutoff of the heating and cooling system. Your smart home also monitors humidity levels to help prevent unhealthy mold and mildew.

Peace of Mind

Rest assured with heating and cooling system monitoring that detects potential problems and helps extend the life of your home's most expensive system. And there's no need to worry about damage from your condensate pan overflowing or a water heater leak, your smart home can send you an alert when water is detected.

WHAT'S IN A CONNECTED+PROTECTED AIR KIT?

Hub

The Hub is the brain of your smart home system. It provides your home with a dedicated cellular network and connects all your devices to create a seamless experience with the Mobile App and website.

Smart Thermostat HD

The Smart Thermostat HD keeps your home comfortable while reducing heating and cooling costs. It offers easy installation, a slim form factor and can be controlled from anywhere with the Mobile App.

Remote Temperature Sensor

Place the sensor in any room of your house to maximize comfort in that room, and overall energy savings.

Smart Plug

With the Smart Plug, you can control lighting remotely and create automated schedules. Simply plug a lamp into the switch and enjoy easy lighting control.

Carbon Monoxide Sensor

Our Carbon Monoxide Sensor can work with the Smart Thermostat to automatically shut off the heating and cooling system. This prevents additional CO from being produced or distributed when excess CO is detected in the home.

Dry Contact Sensor

The Dry Contact Sensor will alert you before your heating and cooling system's condensate pan overflows, giving you time to act before major water damage or mold growth can occur.

Water Sensor

The Water Sensor helps protect your home by detecting water leaks and notifying you immediately, so you can ensure that a small leak doesn't become a costly problem.

Get Even More from Your Smart Home

Expand the convenience and functionality of your smart home by adding smart locks, light switches, video monitoring and more—all controlled by the same Mobile App. Contact us to learn how you can have a smarter, healthier home today.

Smart Thermostat HD

Take your home to the next level of comfort, control, and energy savings. The Smart Thermostat HD offers a sleek touch screen display and works with other connected devices to optimize energy savings and deliver unmatched convenience.

Stay Comfortable in Style

Stylish Display

The high resolution, full-color touchscreen display wakes up on approach, greets you with different messages based on the time of day, and provides a rich user experience.

Smart Energy Savings

Beyond its energy-saving schedules, the Smart Thermostat HD can automatically adjust your home's temperature based on real-time activity, occupancy, and your geo-location.

Convenient Comfort

You can adjust the temperature from anywhere using the Mobile App, even the sofa. And because the Smart Thermostat HD works with the Alarm.com platform, it can be included in a bedtime Scene that adjusts the temperature, lights, and locks with a single tap in the Mobile App.

Peace of Mind

Smart Thermostat HD alerts you to emerging heating and cooling system issues. This helps prolong the lifespan of your home's most expensive system and avoid breakdowns during a heatwave or cold winter night.

Contact your Service Provider today to have Smart Thermostat HD professionally installed.

Building36.
AN ALARM.COM COMPANY

Protect Your Home from Carbon Monoxide

According to the Centers for Disease Control, Carbon Monoxide (CO) is the leading cause of nondrug poisoning deaths in the U.S. That's why Building36 has partnered with the leading manufacturer of CO detectors, Ei Electronics, to create the Z-Wave Smart CO Alarm. It improves safety by alerting you and your trusted service provider when there are unsafe levels of CO in your home.

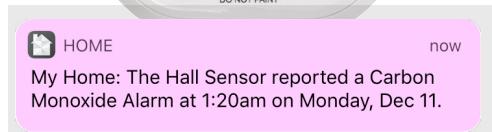

Automatic Safeguards

The Smart CO Alarm connects to a dedicated Cellular Hub and integrates with other smart devices to provide advanced protection. When unsafe levels of CO are detected, a siren alerts those at home and notifications are sent through the Mobile App so loved ones know to stay away from the property.

The Smart CO Alarm and Alarm.com Smart Thermostat can work together to automatically shut off your HVAC system when CO is detected to prevent circulation of the dangerous gas.

Proven Quality

The Ei Carbon Monoxide detector protects millions of homes worldwide. Each unit is individually calibrated and tested in CO gas to ensure accuracy.

"I received an elevated CO Alert on my Mobile App at 2AM. I thought it was a false alarm and returned to bed. A short time later, I was awakened by the fire department outside my house. They came in and confirmed our house had an unsafe level of CO and we were evacuated. I found out that my service provider notified the fire department after they received the same CO alert for our house. We are forever grateful to our service provider who saved our lives that night."
